Marty is going to call the state guy. I agree, they are not ready to consume services. We can provide them a geodatabase in the meantime.

I believe there will be some wordsmithing on their website tomorrow

So no call is needed tomorrow until we have further discussions with the state GIS guys.

I agree with Marty, they kept switching tracks on this afternoon's call.

Since they want to test consuming an ArcGIS 10 service in ArcGIS 9.3.1 and have not yet decided what data they want to show, I wasn't even going to bother trying to push anything to orator until next week, since it is so far from production. I was going to use our cloud server for this proof of concept exercise. I'm completely open to a call tomorrow but realistically, if someone can just be on call for the holiday weekend I think that will be plenty. I don't think the state will have decided what they want until next week anyway when we have results data coming through.

If someone can take the action item to check in with ERT and make sure that the Scribe service on Orator production is the latest, that would be a good idea. And make sure the service is running. I can check staging.

That would be me. I negotiated the webservice but I think they are confusing sample data with ASPECT.

Who is working with the NM GIS people to make sure Orator can serve out web services to the state. We should probably have a quick call with Qi, Tim, and Scott to make sure we can serve out webservices from orator. The scribe service to Orator should still be there. We would just need Qi to deploy on production.

All samples that have been shipped up through today are in scribe and will get published tonight.

Dominic,

Here is the contact information for Brad and Melissa.

You should have gotten the DED from a different source.
